

Build your future with Architectural Technology at BCTC

BCTC's **Architectural Technology** program is the only program of its kind in Kentucky.

The program's faculty consist of three full-time registered architects licensed in the state of Kentucky and adjunct faculty who are specialists in their areas of expertise such as construction management, building codes, and architectural illustration.

Students in the program develop skills necessary for the preparation of construction documents from schematic design approval into design development, contract documents, and contract administration phases for the built environment.

This unique program offers important educational opportunities outside the classroom, including field trips, design competitions, professional networking, and internships. Many of these activities are made possible through the American Institute of Architecture Students (AIAS), a student-run professional organization.

For students who would like to pursue a bachelor's degree, BCTC's Architectural Technology program has transfer agreements in place with four-year schools in programs such as Architecture, Construction Management, and Landscape Architecture.

Get started with Architectural Technology

BCTC's Architectural Technology program is located at the Cooper Campus. The courses are focused on individualized instruction and problem solving with a combination of lecture and hands-on lab activities.

Assignments can vary from completing design or construction documents to case study models where students apply the principles they are learning to real world applications. Students will gain practical experience by writing, speaking, and presenting in all of their classes, preparing them for future employment.

Financial aid and scholarships specifically for Architectural Technology students are available.

Architectural Technology graduates are sought after by employers and starting salaries for program graduates in entry level positions range from \$15 to \$25 per hour.

"This program has shown me what it means to be a professional. The faculty has gone above and beyond to give their students every opportunity to excel. Even with my limited experience in the architectural field, I've not met a challenge in my paid work that I have not been prepared for."
