Looking for a career in technology?

Enroll in CIT at BCTC!

Every field needs employees with computer knowledge. Computer-related jobs are among the fastest growing in Kentucky and nationwide.

The Computer & Information Technologies program at BCTC combines lecture and hands-on activities as students learn the theory of computing and put that theory into practice.

The CIT Computer Club and Bluegrass Women in Technology are two student groups that meet outside of the classroom, and BCTC faculty, staff, and students are active in outreach activities that spread awareness and enjoyment of technology year-round.

Whether you have computer experience or are looking to refresh your computer skills, you need to be in CIT at BCTC.

Get started with CIT!

BCTC's Computer & Information Technologies program starts students off with a well-rounded curriculum allowing students to get exposure to various aspects of the field.

Students are then able to specialize in one area, including applications, computer science, internet technologies, networking, programming and video game design as they get further along into their studies.

See a CIT advisor for more information about core classes and available tracks.

Our CIT graduates work as:
- programmers
- computer operators
- help desk/software support
- video game designers
- networking technicians
- database/computer analyst

They work for Amazon, Xerox, the University of Kentucky, and many other businesses.
