

### Exploring Career Opportunities

The term "health services administrator or manager" encompasses all individuals who plan, direct, coordinate, and supervise the delivery of healthcare services. Generally, they fall into one of two categories: 1) generalists (health care administrators) - who manage an entire facility and 2) health specialists (departmental managers) - who are in charge of specific departments within a health care facility. EKU's Health Services Administration degree lays the educational foundation for both of these categories.

### The Health Services Administration Program at EKU

The Health Services Administration program at EKU offers two academic opportunities.

#### Ancillary Health Management

Ancillary Health Management (AHM) is a degree progression opportunity. This option is for credentialed or licensed practitioners with a previous degree in a health-related field who want to advance into supervisory and managerial positions within a health care organization.

#### Health Care Administration and Informatics

Health Care Administration and Informatics (HCAI) provides individuals with a unique blend of both business and healthcare-related course work. This option is ideal for individuals who would like the flexibility of developing a career as either 1) a health care administrator or 2) a specialist in health informatics and information management.

The HSA curriculum establishes a strong health care management foundation while developing a depth of knowledge in health informatics. Health informatics and information management professionals are experts in collecting, interpreting, and analyzing patient data for clinical, financial, and administrative decision-making. With the advancement of health communication and information technology, the need for these professionals will grow significantly in the future.

Students graduating from the HCAI option are eligible to sit for the national certification examination leading to a credential as a Registered Health Information Administrator (RHIA).

The HCAI option is accredited by the Commission on the Accreditation for Health Informatics and Information Management Education (CAHIIM).
