

## IMMUNIZATIN CHECKLIST

Student Name \_\_\_\_\_

Student ID \_\_\_\_\_

You are required to have documentation of the following vaccinations to participate in course PHA 250 Pharmacy Experience in the spring semester. This course is required for completion of the Pharmacy Technology Program. Due date to submit all documentation is [Click here to enter a date](#). If you have any questions, please contact Experiential Site Coordinator.

For the protection of patients, immunizations (or known immunity) against measles, mumps, rubella, tetanus, diphtheria, pertussis and varicella (chickenpox) are mandatory for all volunteers and observers. Annual seasonal flu vaccination is also required. In addition, for your protection, it is highly recommended that you complete a hepatitis B vaccination series. Finally, we are required by the State of Kentucky to have proof of tuberculosis testing for all students prior to starting at hospital clinical sites and then again annually. The information below outlines the required vaccinations and the acceptable documentation. Please note that all documentation must be in the English language in order to be accepted.

**MMR (Measles, Mumps, and Rubella)**

Proof of immunity to rubella, rubeola and mumps if born in 1957 or later. One of the following may be used as documentation:

- Documentation of two MMR vaccines with the first dose at 12 months of age or older
- Documentation by a physician of having had rubeola, rubella and mumps disease
- Documentation of protective rubeola, rubella and mumps titers

If there is a medical reason that you cannot receive an MMR vaccine, please bring physician documentation.

**Tdap (Tetanus, Diphtheria, and Pertussis)**

This is different from the regular tetanus (Td) vaccine that is recommended every 10 years. It is also different than the childhood DTaP vaccine. The Tdap is only given once.

All who enter a health care facility for volunteering or observing are required to have one Tdap vaccine

**Hepatitis B**

As a student, you should not come into contact with patient bodily fluids. However, accidents happen. Hepatitis B vaccine is strongly recommended, but not required. If you

have had the Hepatitis B vaccine in the past, please bring documentation of all three doses.

**Varicella (Chickenpox)**

Proof of immunity to varicella by one of the following:

- Positive varicella antibody titer
- Immunization with varicella vaccine (Full immunization with the varicella vaccine requires a series of two injections)

If your varicella titer is negative, you will be required to receive two (2) doses of varicella vaccine at the recommended intervals.

**Tuberculosis Screening**

You must have a recent TB test. We accept TB tests from the health department, other hospitals' employee health programs, the military, and other clinics where TB testing is performed frequently (Occupational Medicine Clinics). The TB documentation MUST include the following information in order to be accepted:

- The date given, the date read, and the reading in millimeters.
- It must also be signed by the clinician who performed and read the test.
- If positive, include the physician documentation of the positive test and negative chest x-ray report.

If you have a history of a prior positive TB test, we will need all of the documentation about that test, any follow-up evaluations you had (including chest X-rays), and any treatment you received.

**Seasonal Influenza Vaccination**

All students who will be located in the hospital or patient care facility between October 1 and March 31 of the current year are required to have the seasonal influenza vaccination for that year.

**Copy of insurance card (Front and Back)**

**Others** \_\_\_\_\_

**Please note** that these are the basic vaccination requirements. Different institutions may have requirements that are more stringent. When in conflict the more stringent requirements shall be observed.
